

CITY OF CENTRAL MASTER DRAINAGE PLAN

Public Informational Meeting

Central Middle School Cafeteria

Monday, April 9, 2018 | 5:00 PM - 7:00 PM

Introduction Video

The introductory video is a great place to start. This video will play on a constant “loop” throughout the evening.

Stations

Project team members are situated at the stations in the meeting room with name tags. Feel free to ask them questions as you view the different stations.

Written Comments

You may also make a written comment for the record via the Comment Forms which are located at the Comment Table.

MASTER DRAINAGE PLAN OVERVIEW

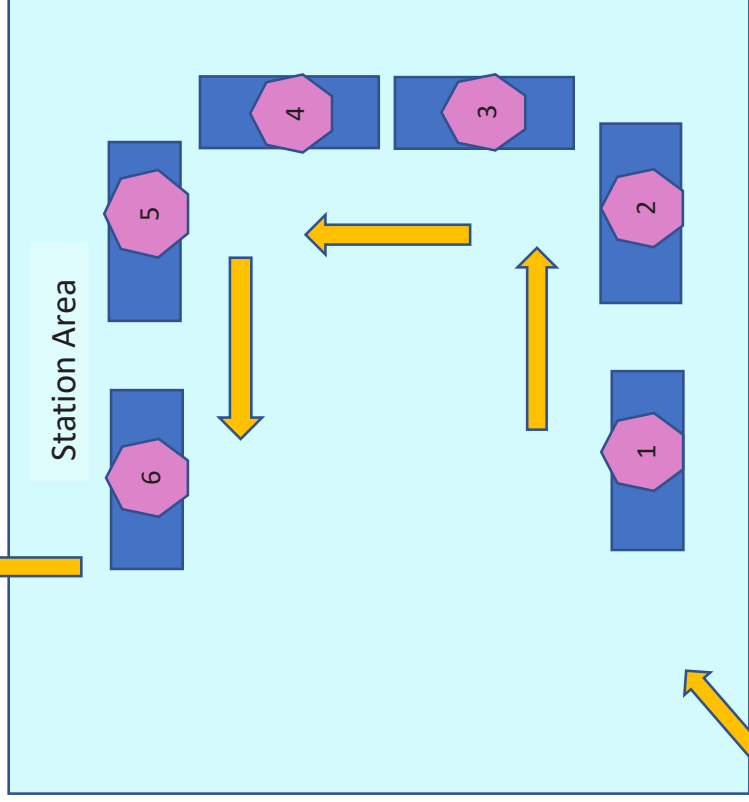

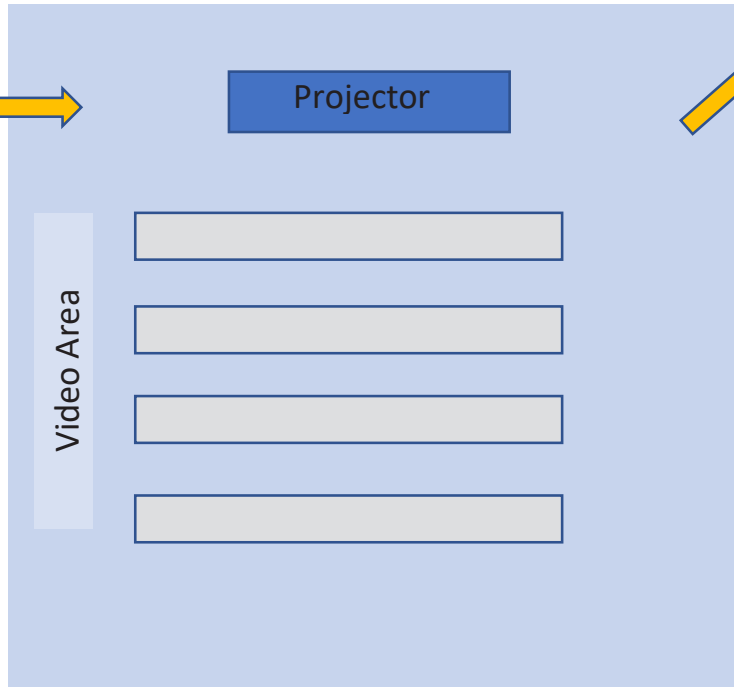

The Master Drainage Plan is intended to provide a comprehensive evaluation of current conditions, perform hydraulic and hydrologic modeling and identify areas of improvement (maintenance and projects) for the City’s drainage system. Efforts of the study include:

- Gather and collect data (existing data, survey data, past events, etc.)
- Model current conditions to identify problem areas within major drainage features
- Develop project ideas to address problem areas identified during modeling
- Prepare a capital improvement plan with a prioritized list of projects and funding strategies
- Provide the City with recommendations to improve its FEMA Community Rating which could result in lower flood insurance premiums for citizens
- Create recommended resiliency strategies for the City to consider as a tool to minimize future risks

Thank you for your attendance! Don’t forget to provide input at our comment table!
